

Color Capabilities

Our process begins in the lab where custom colors and specified performance attributes are developed and tested before being moving into production. Most of our fabrics are piece-dyed and made in America, allowing us to keep greige or undyed stock on hand and enabling us to be more responsive. This processing advantage results in shorter lead times for our customers.

Benefits

- Custom colors including brand colors
- Shorter lead time (especially for large projects)
- Easier to provide a broad color palette for fabric
